Devansh Himanshu Patel

devansh655patel@gmail.com — LinkedIn: DHP65 — GitHub: DHP065

Professional Summary

Final-year Computer Engineering student specializing in IoT, Cybersecurity, and Blockchain Technology with hands-on experience in AI-powered applications, computer vision, and full-stack development. Proficient in Python, Java, JavaScript, SQL, and modern development tools with a strong interest in building scalable software solutions.

Education

- **Lokmanya Tilak College of Engineering** — Expected 2027
  B.E. Computer Engineering (IoT, Cybersecurity & Blockchain Technology) — *CGPA: 7.94*
- **Diploma in Computer Engineering** — 2024
  Percentage: 84%

Technical Skills

Languages: Python, Java, C, JavaScript, SQL, HTML, CSS
AI/ML: PyTorch, OpenCV, MediaPipe, Edge AI
Frameworks: Streamlit, Express.js, Bootstrap, REST APIs
Databases: MySQL
Tools: Git, GitHub, Node.js, npm, Composer, XAMPP
Concepts: IoT, Cybersecurity, Blockchain, Networking, Computer Vision

Projects

- **Hybrid Deepfake Detection System** — Python, Streamlit, PyTorch
  - Developed a hybrid AI-powered deepfake detection system using ResNet18, OpenCV, and MediaPipe.
  - Implemented real-time detection, automated analysis reports, and confidence visualization.
  - Evaluated performance using Accuracy, Precision, Recall, F1-Score, ROC-AUC, and Confusion Matrix.
- **Smart Parking Management System** — Edge AI, Computer Vision, Cloud
  - Designed an AI-powered smart parking solution integrating Edge AI, Computer Vision, and Cloud Computing.
  - Implemented CCTV-based parking detection, QR authentication, geo-fenced reservations, and cloud synchronization.
  - Built a responsive web dashboard for live parking availability and administrative monitoring.
- **ThreatForge – Cybersecurity File Analysis System** — JavaScript, HTML5, CSS3, Web Crypto API
  - Built a zero-backend malware analysis platform with SHA-256 fingerprinting, entropy analysis, string extraction, and binary inspection.
  - Implemented YARA-inspired detection and explainable risk scoring (0–100) to classify files into four threat levels.
  - Classified uploaded files into Low, Medium, High, and Critical risk categories.
- **Arcadia – Interactive PC Gaming Platform** — HTML, CSS, JavaScript
  - Developed a responsive gaming platform with REST API integration, search, and filtering.
  - Implemented wishlist management, user dashboard, and purchase workflow.
  - Added theme switching, trailer galleries, and offline caching using LocalStorage.

Certifications

- Foundation Course on Green Skills and Artificial Intelligence – Skills4Future (2025)
- Data Structures and Algorithms – Coursera (2026)

Leadership & Activities

- Design Co-Head – ISTE
- Creative Team Member – CSESA
- Assisted in organizing and running **7+ campus-wide events**, working alongside club leadership to ensure smooth execution. .
- Assisted the Training & Placement Office (TPO) with placement activities.
